

CALCULATION N^o. 182326

CATALOGUE ENTRY IDENTIFICATION NUMBER: 182326

TITLE: RELATIVITY IS RELATIVE

DATE RECORDED: 31 DECEMBER 2010

CALCULATION:

It is impossible to judge how *big* a space is until a person sees it empty.

NARRATIVE

This calculation expresses a simple yet powerful human truth. The size of anything is of no importance or of any value to physics or mathematics. The immensity of Jupiter or the miniscule sizes of an atom are merely symbols representing mathematical values, in scientific or mathematical terms. It is us, human beings, who are what make something mathematically larger than other values in the same category and turn into something "friggin huge!". These equations are expressed in humanics; new math which results from the union of physics and human judgment.

This math belongs, in its entirety, to my sisters: Jexica, Mayerling and Mirita and to my Mom; Miriam. If not for them, I would never have been able to judge the immense emptiness that exists in every minute that passes without being next to them. That emptiness is the only thing in the universe bigger than the love I have for them.

I love you.

We can do better.

Choose, don't excuse.
